

# WRIGHT AT HOME

Like Frank Lloyd Wright, explore geometry in nature as you use simple shapes and symmetry to design snowflakes!

**Print and cut out our free pattern blocks below or make your own geometric shapes.**

*Did you know that snowflakes have six sides or six points?*

Use the HEXAGON—a geometric shape with six sides and six points—as the center of your snowflake design.

Then, use your pattern blocks and symmetry to work outwards.

How many different designs can you create?
